Every connection mapped, encrypted, and proven.

Greymatter.io learns your real traffic, sends each pod through its enforcement point, and shows how each call was carried.

Network graph: learned from live traffic, with AI egress called out by name.

TRAFFIC

Learned, not declared.

The traffic map is built from observed calls. Unmanaged callers stand apart, and AI egress is named.

ENCRYPTION

How each call was carried.

mTLS inside, TLS outside, plus the TLS version, ciphers, and key exchange each service negotiated.

ENFORCEMENT

No path around the enforcement point.

The Greymatter.io CNI is on by default. See the exact nftables rules as applied. A node agent repairs drift.

PORTABILITY

Posture that travels.

Export learned posture and grants. A new cluster starts secured from its first pod, with no relearning.

BY THE NUMBERS

Day 1 post-quantum encryption, on by default

Live traffic map, learned from real calls

0 relearning when posture moves clusters

NEXT STEP

Questions, demos, and lab access
